Work Experience

EMPLOYER	trivago N.V.
POSITION	Mobile Engineer III
DATES	July 2022 - Present
LOCATION	Düsseldorf, Germany (Hybrid)
RESPONSIBILITIES	Contribute to the development of the trivago hotel search Android application in a cross-functional, end-to-end software development team (from user research to QA, and data analysis)
	Participate in code reviews ensuring adherence to team standards and suggesting alternative approaches to solutions when required
	Take charge and facilitate tech improvement projects including strategisation, execution, and reporting
	Provide technical support/guidance in development discoveries as squad tech lead
	Mentor junior/new peers supporting their technical knowledge and product familiarity growth
ACHIEVEMENTS	Led and managed the introduction of the Jetpack Compose UI framework to the trivago Android app resulting in improved developer experience, faster development iterations and improved app quality
	Assumed responsibility for the development of key member-centric features including the hotel price drop feature (registration, notifications and list management) and the favourites lists feature increasing member acquisition and engagement

EMPLOYER	Headspace Care (formerly Ginger)
POSITION	Senior Mobile Engineer
DATES	April 2021 - August 2022
LOCATION	United States (Remote from Lagos, Nigeria)
RESPONSIBILITIES	Worked in the mobile engineering team to develop the Ginger Care mobile app, including features such as user registration, authentication, content, and user data management.

Created and reviewed technical design documentation detailing problem-solving approaches to new changes, including specifying pros and cons and readapting based on feedback.

Through connecting and tracing user journeys and loggings, resolved and improved users' experiences and reported bugs.

Participated in frequent end-to-end, manual QA on the Android and iOS apps, preventing regression and ensuring the expected behaviour of new features.

Managed Play Store and App Store releases of the Ginger Care app, including organisation/definition of changes and coordinating testing protocols.

ACHIEVEMENTS	Ported the Ginger Flutter Mobile app to a Flutter Web app, leading to quicker development iterations and an increased user base.

Redeveloped the content system of the Ginger Care app in a three-person engineering sub-team, resulting in higher quality and a better user experience.

EMPLOYER	Autochek Africa
POSITION	Android Engineer
DATES	September 2020 - May 2021
LOCATION	Lagos, Nigeria (Remote)
RESPONSIBILITIES	Worked in a startup team to develop and release the Autocheck car marketplace Android app, including features such as ad placements/uploads, financing application process, purchase payments, user authentication, etc.

Led the development of the Autochek partner's inventory management app.

ACHIEVEMENTS Released the first version of the app supporting up to 15,000 downloads.

EMPLOYER Andela <> Intentional Futures
